

VIII. Mini Project - Cristiano Ronaldo Career Performance Analysis

AIM

To clean, process, analyze, and visualize Cristiano Ronaldo's career performance data using Python, and build static visualizations and interactive dashboards using Python, Power BI, and Tableau to derive meaningful football analytics insights.

DOMAIN

Football Analytics / Sports Data Analytics

PROBLEM STATEMENT

Football performance datasets contain player age, appearances, minutes, goals, assists, clubs, competitions, penalties, cards, and career phases. There is a need for a data-driven visualization system to analyze seasonal scoring trends, club-wise performance, goal involvement, age-performance patterns, and career-phase output.

OUTPUT

Python:

Python analysis

Season trends, club comparison, age vs goals, goal involvement, career-phase output, goals-per-90 and correlation analysis.

PowerBI:

Cristiano Ronaldo Career Analytics

Tableau:

Cristiano Ronaldo Career Performance Dashboard

RESULT

Thus, the Cristiano Ronaldo Career Performance Analysis mini project was designed and the analysis was performed successfully using Python, Power BI, and Tableau. The visualizations provide a data-driven view of seasonal scoring, club performance, goal involvement, age-related trends, and career-phase output.
